

Ad-Lib Lactation Feeder for Sows

The advanced PIGTEK® Ad-Lib Lactation Feeder enables a sow to self-feed as much feed as her daily ration program permits. This patented feeder provides pig producers with a better way to manage their nursing sows. The feeder maximizes both piglet growth and sow feed intake while also helping the sow to maintain body condition for the next litter. The feeder can be operated manually or automatically using one of PigTek's feed delivery systems.

Product Features and Advantages

- Feed sows *ad libitum* for high performance by providing the feed they need to maintain better body condition and the resulting improved reproductive efficiency.
- The patented PIGTEK® Ad-Lib Lactation Feeder is a metered feeding system:
 - The metered feeding concept requires sows to work the feeder to get the feed they want.
 - The sow can eat as much as she wants of her specific daily feed ration.
 - This system keeps feed fresh while eliminating the potential for underfeeding of the provided ration.
- Simple, robust design:
 - Unique feeder consists of three components and just one moving part.
 - Feeder quickly disassembles for cleaning.
 - Easy to install and fits most farrowing stalls.
- Innovative design keeps the feeder independent of the water supply and helps to prevent moisture from entering the feed channel and plugging the feeder.
- Fill feeders manually or automatically to match your management style:
 - Large stainless steel manual feeding hopper option holds 15 lbs. (6.8 kg) of feed to help save labor and limit the number of trips through the room with a feed cart.
 - Save even more labor and time by filling feeders automatically using CHORE-TIME® Feed Delivery Systems.
- Options available for limit feeding:
 - Clear, indexed feed tube option aids producers in quickly and accurately verifying the amount of feed being fed when limit-feeding sows.
 - Use PigTek's DOSFLOW™ Volumetric Drop Feeder or the CHORE-TIME Portion Control Drop Feeder to accurately dispense a predetermined amount of feed multiple times per day.
- Feeder can be used with nearly any auger system or building configuration.
